Data Wrangling

Read in the files

Check Dataset Details

```
[1] 10992    22
```

```
[1] 23412    21
```

Convert time characters to date variables for both dataframes

Create truncated date variables, only including the date part

Earthquakes data

Transform column names to lower case for both dataframes

Also, remove the dot character, “.” from the column names of the earthquake data and lower the case of the values in the id column for the earthquakes data

Finally join the dataframes on common column values

	latitude	longitude	type	depth	deptherror	horizontalerror	id
1	19.246	145.616	Earthquake	131.6	NA	NA	iscgem860706
2	1.863	127.352	Earthquake	80.0	NA	NA	iscgem860737

Creating Magnitude Scale

Find count/frequency of earth quake types per magnitude

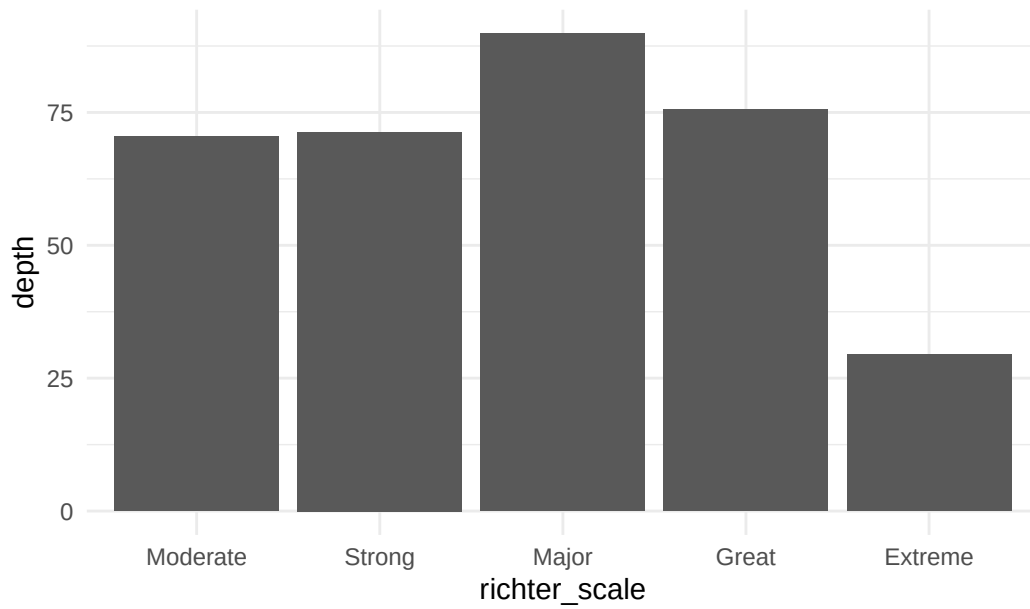

Min.	1st Qu.	Median	Mean	3rd Qu.	Max.
5.500	5.600	5.700	5.883	6.000	9.100

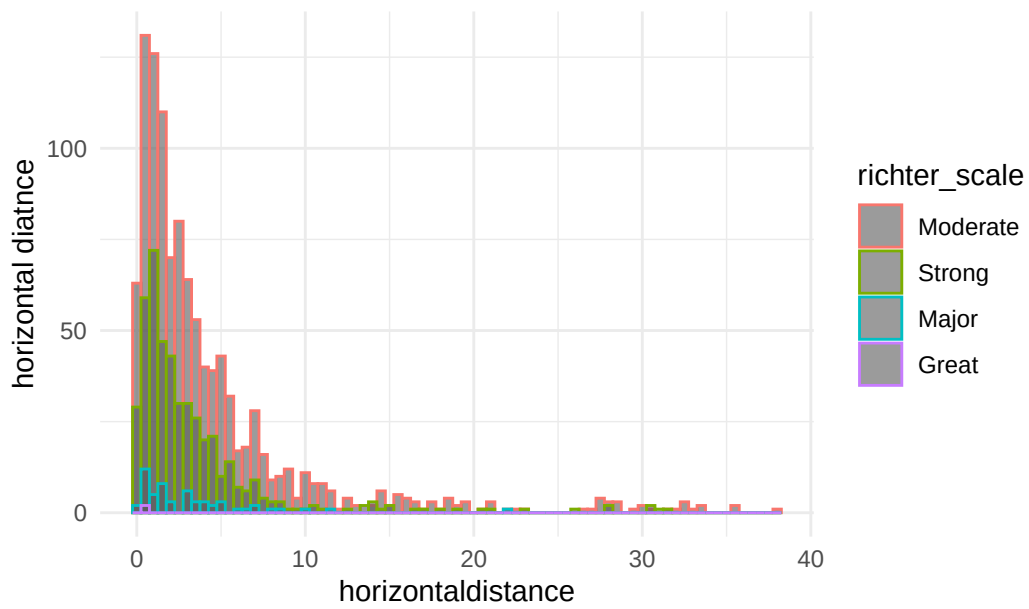

Min.	1st Qu.	Median	Mean	3rd Qu.	Max.
5.500	5.600	5.700	5.883	6.000	9.100

Average horizontal distance per earthquake category

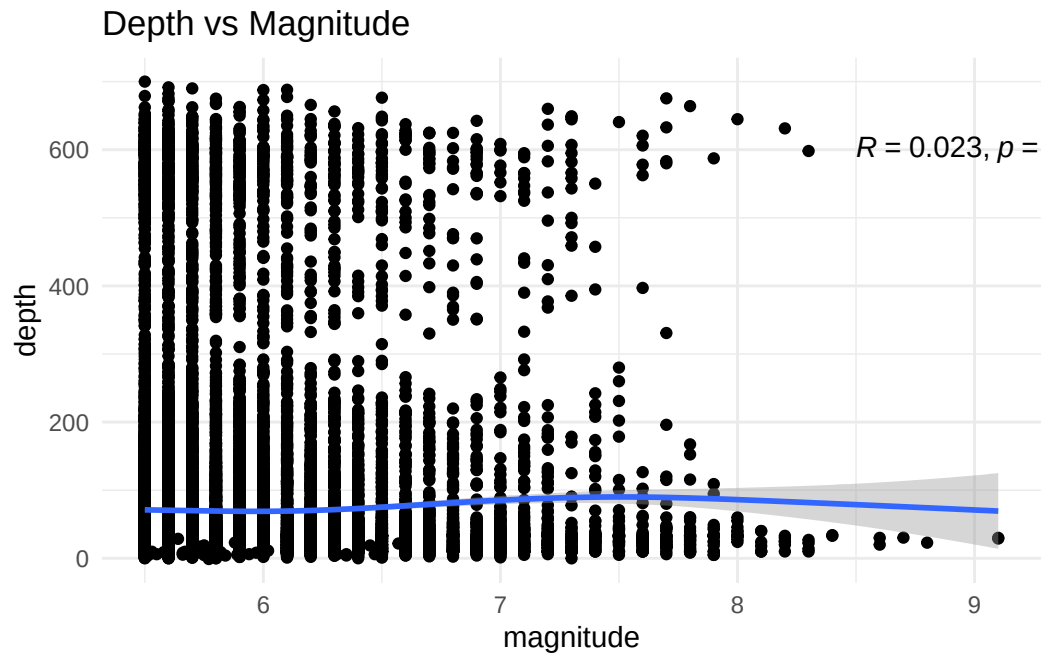

Depth vs Earthquake Magnitude

A bar chart with 'richter_scale' on the x-axis and 'horizontal distance' on the y-axis. The x-axis categories are 'Moderate', 'Strong', 'Major', and 'Great'. The y-axis ranges from 0 to 4. The bars show a decreasing trend in horizontal distance as the Richter scale category increases.

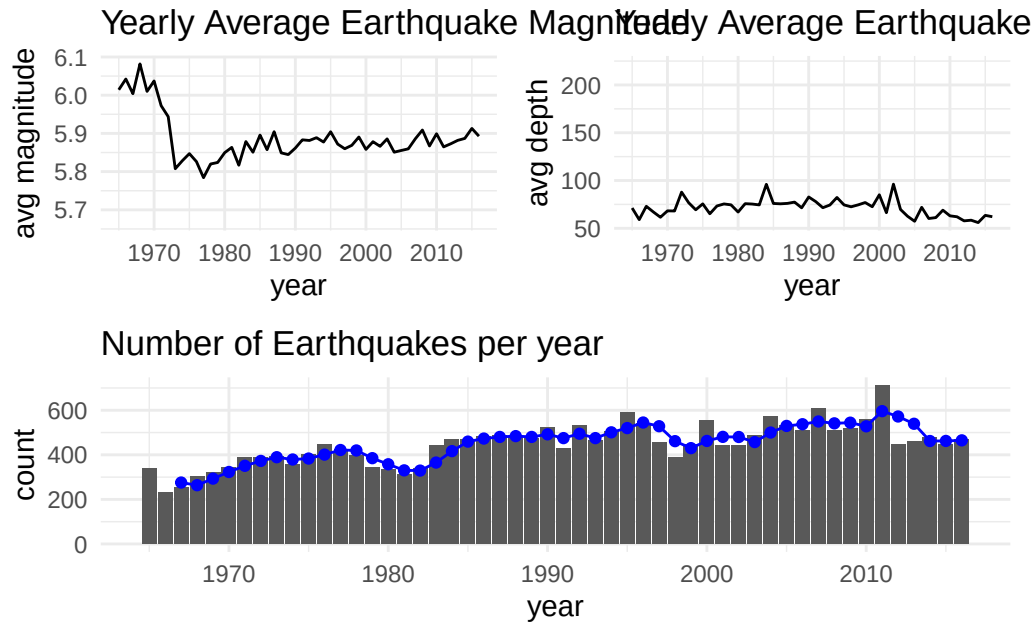

richter_scale	horizontal distance
Moderate	4.3
Strong	3.4
Major	3.2
Great	0.6

A scatter plot showing the relationship between distance (y-axis, 0 to 35) and magnitude (x-axis, 5 to 9). The data points are black dots. A blue line represents the linear regression, and a grey shaded area around it indicates the confidence interval. The regression equation is $R = -0.094$ and $p = 0.00016$.

```
# A tibble: 5 x 4
  richter_scale total_ids total_gr percentage
